Metric definitions

Releasability

Portfolio releasability is the average releasability of the portfolio's projects. A portfolio receives an 'A' if an average of > 80% of projects are releasable or an 'E' if an average of \leq 20% of projects are releasable. A project is releasable if it's passing its Quality Gate.

Security Review

Portfolio security hotspots review is the average rating of the portfolio's projects. A project's rating is based on the number of To Review and In Review Hotspots per 1000 lines of code.

Reliability

Portfolio reliability is the average reliability of the portfolio's projects. A project's reliability rating is based on the severity of its worst open Bug. A project receives an 'A' if it has no open Bugs or only Info-level Bugs or an 'E' if it has a Blocker Bug.

Maintainability

Portfolio maintainability is the average maintainability of the portfolio's projects. A project's maintainability rating is based on the ratio of the size of the project to the estimated time to fix all outstanding Code Smells. By default, a project receives an 'A' if it has \leq 5% ratio yields or an 'E' if it has \geq 51% ratio yields.

Security Vulnerabilities

Portfolio security is the average security of the portfolio's projects. A project's security rating is based on the worst open Vulnerability in the project. A project receives an 'A' if it has no open Vulnerabilities or only Info-level Vulnerabilities or an 'E' if it has a
